## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1, 3-5, and 7-15 are allowed.

Re claims 1, 14, and 15, the independent claim includes " the isolator protrusion being coated with a diamond-like DCL coating, comprises a two-layer composite structure with a base layer that consist of oxide and the base layer is coated with a top layer of the diamond-like coating " in combination with the remaining claim limitation is not taught and/or made obvious by the prior art. As noted Schmiesing et al. teaches a pair of electrodes having protrusions (125, 171) made of the same material as the base element. Schmiesing et al. does not teach the feature of a two-layer composite structure. Biebl teaches a movable part (2) and a substrate (1) having electrodes disposed on the oppositely situated surface and can be implemented as an acceleration sensor (Col. 4, lines 20-24; 50-53). Biebl teaches a protrusion (e.g., spike 3) between the movable part (2) and the substrate (1) that is made of a dielectric material (Col. 3, line 57-31). Biebl does not teach **the isolator protrusion being coated with a diamond-like DCL coating, comprises a two-layer composite structure.**
